OBJECTIVE

To secure a responsible career opportunity to fully utilize my skills, while making a significant contribution to the success of the organization.

EXPERIENCE

- **Infosys Limited** Oct 2025 - Dec 2025
Infosys Springboard Virtual Internship 6.0 Remote
 - Developed an AI-powered Electronic Health Record (EHR) imaging and documentation system using Python and Machine Learning models, automating the extraction of structured data from medical documents.
 - Implemented advanced image recognition techniques to accurately parse handwritten patient records, enhancing documentation accuracy and significantly reducing manual data entry effort.
 - Conducted analysis on medical document datasets, identifying patterns to improve structured data extraction and streamline the EHR documentation pipeline.

EDUCATION

- **VSB Engineering College** Sep 2023 - Present
B.E. Computer and Communication Engineering Karur, Tamil Nadu
 - CGPA: 7.8
- **Thamarai Matric Higher Secondary School** March 2023
Higher Secondary Education Erode, Tamil Nadu
 - Percentage: 74.67%

PROJECTS

- **PreVent AI | React, Vite, FastAPI, PostgreSQL, PostGIS, XGBoost, OR-Tools**
 - Built an AI-powered food waste forecasting and NGO redistribution platform, integrating a React/Vite frontend with a FastAPI backend and PostgreSQL/PostGIS for geospatial data handling.
 - Implemented XGBoost-based demand forecasting models to predict surplus food inventory, enabling proactive redistribution planning for partner NGOs.
 - Designed OR-Tools optimization algorithms for route planning, minimizing delivery time and maximizing food recovery across NGO distribution networks.
 - Followed a mock-data-driven development workflow, building out the full frontend experience before incrementally wiring the backend for faster iteration.
- **VisionOps AI | React, TypeScript, FastAPI, ChromaDB, Groq, Docker**
 - Developed a smart factory predictive maintenance dashboard with ISA-95 inspired four-role RBAC for differentiated access across operator, engineer, and admin roles.
 - Built Remaining Useful Life (RUL) prediction models trained on the NASA CMAPSS dataset to forecast equipment failure and optimize maintenance scheduling.
 - Designed a RAG-based maintenance advisor using ChromaDB and Groq LLM, delivering context-aware troubleshooting recommendations from historical maintenance data.
 - Implemented WebSocket-based real-time sensor data streaming and containerized the application with Docker for scalable deployment.

AREAS OF INTEREST

- Full-Stack Development
- Database Management Systems (DBMS)
- Data Structures and Algorithms (DSA)

SKILLS

- **Programming Languages:** C, Java, JavaScript, Python, SQL
- **Web Technologies:** HTML, CSS, React.js
- **Database Systems:** MySQL, SQL Server
- **Version Control:** Git, GitHub
- **IDEs:** Visual Studio Code, Eclipse
